Paul,
Thanks for your comments. I'm just waiting on ARCADIS to provide the response to comments on the MW construction that was forwarded a few days ago.
I'll keep you posted.
Tanya

Tanya –

Our comments are as follows In general we are good with the procedures, but note that the specific language have minor comments.

The locations seem to follow those outlined in EPA's email from March 30. Procedure is fine.

The revised locations may not really be out of water, especially for MW-13, MW-18 and MW-20, however, the FCR addresses what to do in the event they're not so that is ok.

For MW-13 the distance they describe co-locates with SS-158, per EPA's suggestion (as opposed to downgradient of it, per the FCN text).

For what it's worth, they say they will advance all of these borings 20 feet, which seems deeper than we think they would need to go. They went down to ~13 feet for MW-17 (Based on water table and resulting well depth).

Let me know if you have any questions.

Paul

Hello All,

Attached is a FCR for the remaining MWs at the site. Please review and let me know if you cannot provide your comments by Monday, 4/27.

Thanks,

Tanya
